

## IDA PRO – the state-of-the-art binary code analysis tool

IDA Pro is the flagship product of Hex-Rays, the software provider in reverse engineering. Being an interactive and programmable disassembler and debugger, IDA Pro provides excellent quality performance on different platforms and is compatible with many processors. IDA Pro has become the de-facto standard for the analysis of hostile code, vulnerability research and commercial off-the-shelf validation.

IDA Pro comes with different types of licenses: Named, Computer, Floating and Educational license to meet different business' scales and demands of usage.

A disassembler

A debugger

interactive

Programmable

## Key features

### Multi-processor Disassembler

- Disassembler modules for a large number of processors. The free SDK even allows you to run your custom disassembler;
- Full and extensible interactivity;
- Programmable: IDA can be extended in line with user's own requirement with IDC or IDAPython;
- Open plugin architecture: external plugins enable extension of IDA's capability;
- FLIRT technology (Fast library identification and recognition technology);
- Code graphing;
- Lumina server holds metadata with a large number of well-known functions;

### Multi-target Debugger

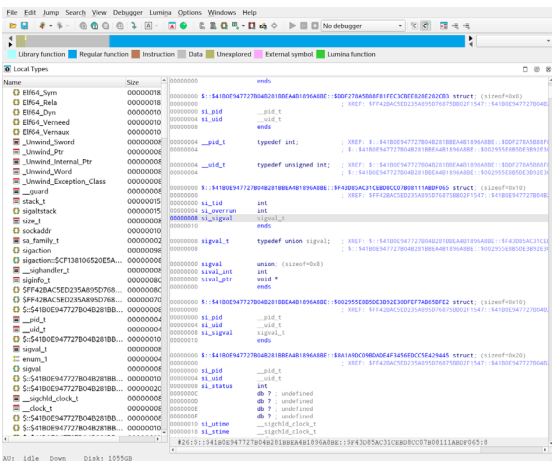

- The debugger adds the dynamic analysis of the information collected statically by the disassembler;
- Offers all the features expected from a debugger and more: "remote" function and tracking. Remote debugger: for Windows, Linux, Mac OS X, and other machines in any combination;

**More features and upgrades are introduced along with new IDA version releases!**

# IDA 8.4 Highlights

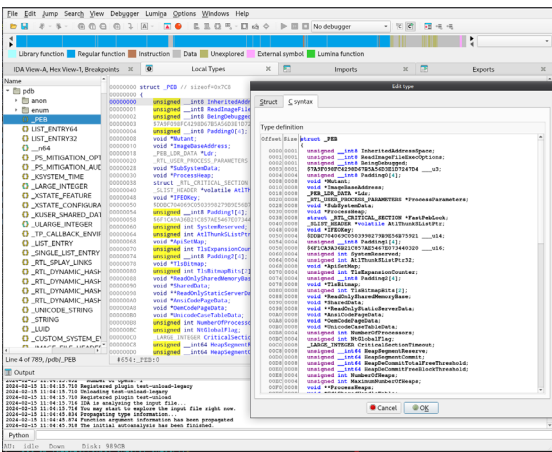

## Unified type storage (ASMTIL)

- The presence of Structures, Enums and Local Types views and synchronization between them confused many users, especially those new to IDA. We have decided to add all missing features (such as structure field representation) to Local Types and now all type manipulations (still with familiar hotkeys!) can be done there. New databases will only have Local Types by default and Structures and Enums are deprecated.

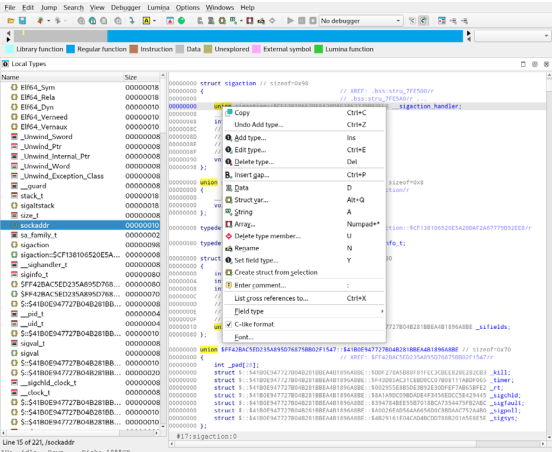

```
Local Types
Name          Size          DB
-----
ERNA_Sym      00000008       00000000  struct ERNA_Sym {
ERNA_Data    00000008       00000000  struct ERNA_Data {
ERNA_Dyn      00000008       00000000  struct ERNA_Dyn {
ERNA_Vermax   00000008       00000000  struct ERNA_Vermax {
ERNA_Vermax   00000008       00000000  struct ERNA_Vermax {
... (many more types listed)
```

- The new Local Types Widget allows editing structures like the classic Structures widget, or via a free-text editor.

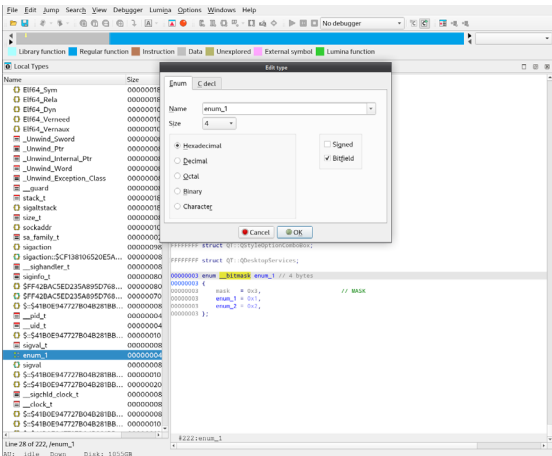

```
Local Types
Name: struct Foo
Type definition:
struct Foo {
  int field1;
  float field2;
  char field3[10];
}
Type definition:
struct Bar {
  int field4;
  float field5;
  char field6[10];
}
```

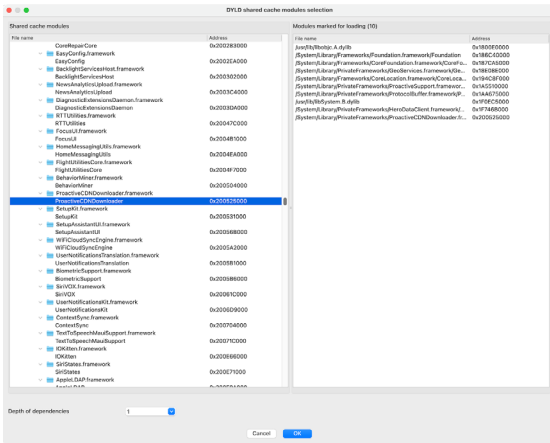

```
Local Types
Name: struct sigaction
Type definition:
struct sigaction {
  void (*handler);
  int flags;
  void (*action);
}
Options:
  Copy: Ctrl+C
  Undo Add Type: Ctrl+Z
  Add Type: Ctrl+N
  Ctrl Types: Ctrl+E
  Delete Type: Ctrl+D
  Data: Ctrl+F
  Struct Type: Ctrl+S
  Group: Ctrl+G
  Attach: Ctrl+A
  Delete type member: Ctrl+X
  Rename: Ctrl+R
  Set field type: Ctrl+I
  Create struct from selection: Ctrl+Y
  Enter comment: Ctrl+L
  List cross references to: Ctrl+W
  Edit Type: Ctrl+T
  C++ comment: Ctrl+K
```

- The same goes for enum types:

```
Local Types
Name: enum Enum1
Type definition:
enum Enum1 {
  member1 = 0,
  member2 = 1,
  member3 = 2,
}
Properties:
  Name: enum_1
  Size: 4
  Signed: checked
  Headecimal: unchecked
  Decimal: unchecked
  Octal: unchecked
  Binary: unchecked
  Character: unchecked
```

- The ARM32 decompiler supports hard-float ABI (floating point values passed and returned in FPU registers):

```

; Attributes: bp-based frame fpu=fp16
; int __fastcall main(int argc, const char **argv, const char **envp)
EXPORT main
main
{
    int n;
    double pi = 0;

    PUSH    {R7, LR}
    SUB    SP, SP, #0x10
    ADD    R7, SP, #0
    LDR    R3, [C:\Program Files\Microsoft SDKs\Windows\v6.0\bin\x86\user32.dll]
    ADD    R2, R3, #0
    MOV    R0, R2
    BLX    R0
    ADDS  R3, R7, #4
    MOV    R1, R2
    LDR    R3, [C:\Program Files\Microsoft SDKs\Windows\v6.0\bin\x86\user32.dll]
    ADD    R3, PC, #0
    MOV    R0, R3
    BLX    R0
    MOV    R0, R2
    MOV    R1, R2
    COMP  R1
    VSTR  D0, [R7, #0x10]
    LDRD.W R2, R3, [R7, #0x10]
    LDR    R1, PC, #0
    ADD    R1, PC, #0
    MOV    R0, R1
    MOV    R0, R1
    ADDS  R7, R0, #0
    MOV    R0, R7
    ADDS  R7, R0, #0x10
    MOV    SP, R7
    POP    {R7, LR}
}
; End of function main

```

```

int __fastcall main(int argc, const char **argv, const char **envp)
{
    double v2; // D0
    int n; // [esp+4] [ebp+4] BYREF
    double pi; // [esp+8] [ebp+8]

    printf("How many terms to calculate pi to? ");
    fscanf_s(stdin, "%d", &n);
    comp_pi(n);
    printf("The value of pi is: %f", v2);
    return 0;
}

int __fastcall main(int argc, const char **argv, const char **envp)
{
    int n; // [esp+4] [ebp+4] BYREF
    double pi; // [esp+8] [ebp+8]

    printf("How many terms to calculate pi to? ");
    fscanf_s(stdin, "%d", &n);
    printf("The value of pi is: %f", pi);
    return 0;
}

```

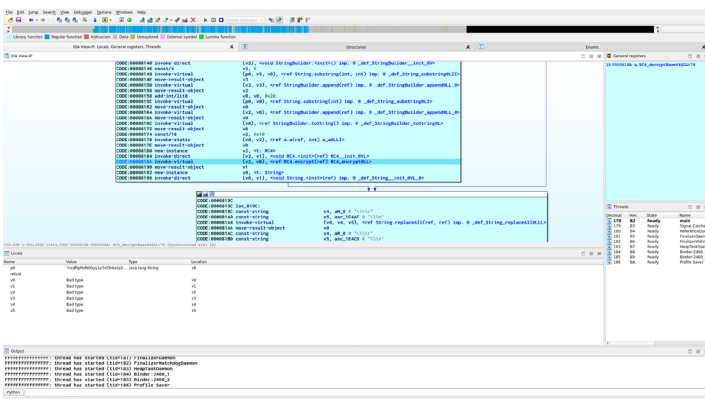

8.3

8.4

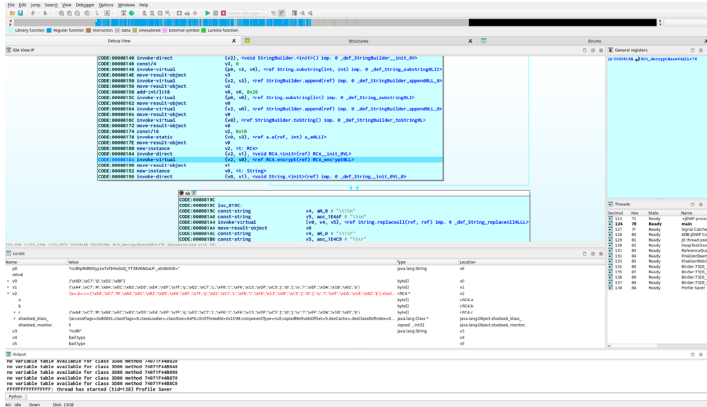

## Debugger improvements

- We added support for recent Android versions and made it more robust when working with apps without debug information. If running on a recent (API28+) Android, IDA will try to guess the variable type automatically. Since in the Dalvik VM the value of a variable cannot be displayed without knowing its type, this boosts the debugging experience significantly.

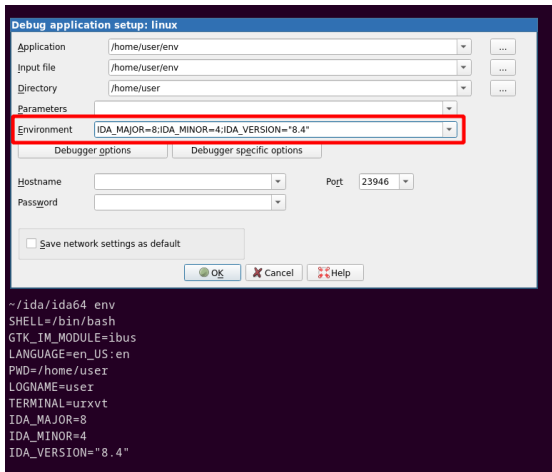

Dalvik debugger without type information:

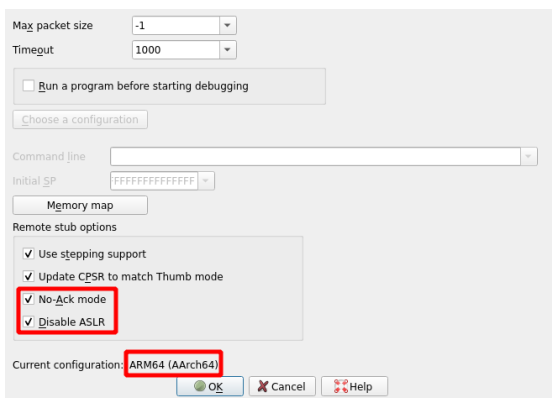

The same app, but with successfully guessed types for all local variable slots that are in scope:

- Environment variables can now be specified for Windows/Linux/Mac debuggers in process options:

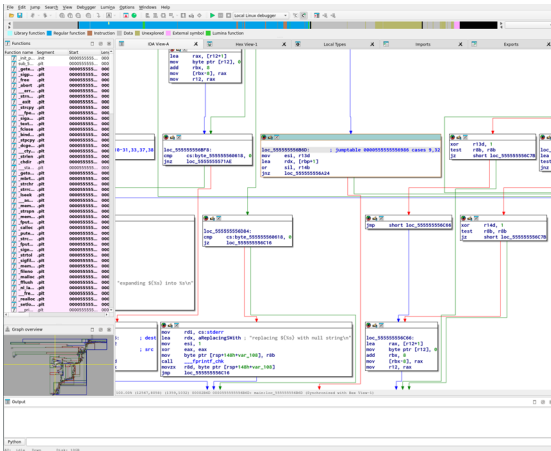

- We made various improvements to the debugging backends:
  - Address Space Layout Randomization (ASLR) can now be disabled for most platforms that support it (local debuggers and remote gdbstub). This simplifies debugging in cases where deterministic addresses are desired.
  - We enabled NoAck mode on iOS, saving one round trip time. This is beneficial for anybody debugging remote devices over high-latency connections (typically cloud-based emulators).
  - Finally, our remote debugging server now is available for ARM64 Linux.

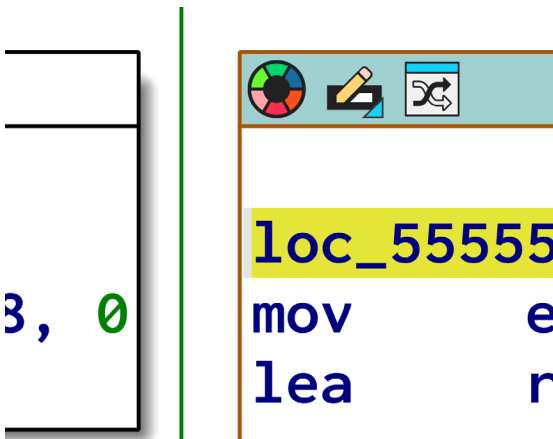

## Modernized Look'n'Feel

- We replaced all icons with brushed-up, vectorized versions and added a crosshair effect to the minigraph view for orientation in large graphs.

IDA with new icons and crosshair effect in the minigraph view

Moreover, pixelated fonts are a thing of the past. Texts in graph mode now render crisp at any zoom level.

- Scrolling and zooming via the trackpad now works smoothly (especially, but not limited to, macOS)
- better graph layouts with fewer(none?) edge intersections, even on big functions

## Improved Parsing of Rust metadata

- We added a plugin for parsing Rust-specific data and constructs. As a consequence, the huge string pools typically observed in Rust binaries are now split up properly. Moreover, the plugin adds demangling of both legacy and the v0 Rust name mangling format.

## Previous releases

**IDA Version 8.3** - Release date: 8th June 2023

Highlights: IDA64 support for (32-bit) .idb files, UX improvements, DWARF speedup, ARM64 system registers, Golang and much more!

**Full changelist:** [https://www.hex-rays.com/products/ida/news/8\\_3/](https://www.hex-rays.com/products/ida/news/8_3/)

---

**IDA Version 8.2 – Service Pack 1** - Release date: 24th January 2023

Highlights: This Service Pack of IDA 8.2 is primarily a bugfix release.

**Full changelist:** [https://www.hex-rays.com/products/ida/news/8\\_2sp1/](https://www.hex-rays.com/products/ida/news/8_2sp1/)

---

**IDA Version 8.2** - Release date: 15th December 2022

Highlights: 32-bit support in IDA64, Processor modules improvements, Swift, picture\_search plugin, UI candy and much more!

**Full changelist:** [https://www.hex-rays.com/products/ida/news/8\\_2/](https://www.hex-rays.com/products/ida/news/8_2/)

---

**IDA Version 8.1** - Release date: 6th October 2022

Highlights: Private Lumina server, New icons, Golang regabi support, Sunsetting IDA for 32-bit binaries and much more!

**Full changelist:** [https://www.hex-rays.com/products/ida/news/8\\_1/](https://www.hex-rays.com/products/ida/news/8_1/)

---

**IDA Version 8.0 – Service Pack 1** - Release date: 29th August 2022

Highlights: The Service Pack 1 of IDA 8.0 is primarily a bug fixes release that provides fixes for a few errors that might affect many users.

**Full changelist:** [https://www.hex-rays.com/products/ida/news/8\\_0sp1/](https://www.hex-rays.com/products/ida/news/8_0sp1/)
